04. [5p] Terminating instances

Since we're done with the VM, we might as well terminate it. Unless we want it to keep running and eating up our funds, needlessly.

```
# terminate instance and delete attached disks
$ gcloud compute instances delete ${INSTANCE_NAME} \
        --zone ${ZONE}                             \
        --delete-disks all
```
